DETAILED ACTION**Double Patenting**

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 33-40, 44-50, 54-60 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-31 of U.S. Patent No.6,680,578. Although the conflicting claims are not identical, they are not patentably distinct from each other because the first and second electrode are operated in the same manner, apply a voltage or a current flow to a cathode and anode.

Regarding independent claims 33, 54 and 59, Patent No. 6,680,578 discloses the first electrode or the second electrode is patterned into individually address segment.

Patent No. 6,680,578 does not disclose the first electrode and second electrode are aligned in the same direction.

However, this difference is not of patentable merit since both the first electrode and second electrode are operated in the same manner, apply a voltage to a cathode and anode or positive and negative voltage and consume a static power even though all voltages and currents are reversed. Therefore, to employ the first electrode and second electrode are aligned in the same direction instead of the first and second electrode in the driving circuit of Patent No, 6,680,578, upon a particular application or environment of use, would have been deemed obvious to a person skilled in the art. Since applicant does not disclose that, all of these limitations can solve any stated problem and for any particular purpose. Therefore, it appears that the invention would not provide any improvement but merely apply the invention in different presentation.

The remaining dependent claims 34-50 and 55-58 and 60 are same as claims 2-24, 26-29 and 31.
